GENERAL CULTURAL DIRECTIONS

POTS FOR WINTER WINDOW BLOOMS: Set 4 to 6

bulbs in 6 inch pots, saturate with water, set in cold-frame or bury outside, covering with coal ashes. After about 6 weeks, the pots may be brought into a cool room and later to a warm sunny window for bringing into flower. Succession of blooms may be enjoyed by bringing in a pot every ten days or two weeks. Varieties marked x will do well in pots if desired; however, Tulips are in their glory set in beds.

BEDDING: Select a well-drained location with good soil, prepare bed thoroughly, adding well-rotted compost, if possible. Set bulbs 6 inches deep 6 inches apart. After the ground freezes over, give a very light covering of litter, straw or compost if climate is severe; this should be removed in early spring.

Our outward life requireth
flowers not,
Then wherefore had they birth?
To minister delight to man,
To beautify the earth;

To comfort man—to whisper hope,
Whene'er his faith is dim,
For Who so careth for the flowers
Will care much more for him.

CHOICE ANNUAL PHLOX Phlox Drummondii

This is one of our best annual flowers. At the North, plants should be started in beds or boxes and transplanted, but in the South the seeds may be sown in Spring or fall where plants are to bloom. They mostly re-seed, and cover the ground with volunteer plants. They like rather sandy, rich soil, and will grow in any garden. Seedlings begin to bloom when small and continue throughout the season. The bright flowers in many colors and variegations appear in big broad clusters. A carpet bed of the plants in special colors makes a glorious display. We offer choice new-crop seeds of the finest races, and can supply the colors separately or all in special mixture. They are hardy annuals, can be sown in early fall.
